

**FOR IMMEDIATE RELEASE**

## **Ingenium Group Inc. Invests in Architectural and Engineering Future**

**KINGSTON, May 5, 2005** - The Ingenium Group Inc., the parent company of Giffels Design-Build, Inc., Giffels Management Limited, Giffels Associates Limited, NORR Limited and NORR Group Consultants International Ltd., Ingenium International and IG Realty, announced at their Open House today that they are investing in the future of young engineers in Canada, with a scholarship for students in the department of Electrical and Computer Engineering at Queen's University.

This scholarship award will be known as the "Ingenium Group Joe Dominik Memorial Scholarship" in memory of their good friend and respected senior architect in the Kingston office and a partner of the original Dominik Thompson Mallette firm that Ingenium acquired several years ago. That firm now operates as a branch of NORR Limited. The Scholarship will be given to a student in the Electrical and Computer Engineering Program who has achieved academic excellence. The first scholarship will be presented in 2006.

Hosting the Open House, Victor Smith, CEO of Ingenium's Consulting Services Division not only presented this award to Steven Blostein, the Head of Electrical and Computer Engineering at Queen's University, but also showcased impressive displays of work from past, present and future projects from around the globe.

The Ingenium Group is a truly multi-cultural, multi-disciplined global business with regional offices in Canada, Asia, Europe, the Middle East and the U.S. Its companies are responsible for projects as wide ranging as the lighting and baggage handling systems for the Hong Kong airport, four warehousing and distribution centres for Sears, the management of Toronto's Front Street Extension project, Calgary's Courts Centre – the largest courthouse consolidation project in North America, the high tech and environmentally responsible SAS headquarters now under construction in downtown Toronto, and most remarkably, Atlantis, The Palm, a destination resort development at the centre of a multi-billion dollar, leisure and residential man-made island in Dubai.

In the Kingston area they recently completed the redesign and construction of Queen's University Nicol Hall, which provides newly designed laboratory space for research in advanced ceramics and nano-materials. Completed in March of this year, NORR renovated the OPP Detachment Brighton facility to house the satellite police detachment serving Northumberland County. And currently under construction are the Pembroke Courthouse alterations (re-opening in early 2007) and the Collins Bay Institutional Redevelopment (opening 2008).

Teamwork, imagination, technical excellence, superior listening skills and commitment to service are the attributes that Ingenium Group Inc. brings to every project. These are the principles by which they conduct their business. Their vision is to deliver design, development and construction solutions through a seamless process that provides a single point of conduct – and responsibility – to their clients, no matter what their project needs.
